

Goal:

To sift every year, using mammograms, through 5500 non-symptomatic women over 40, living within or outside the Greater Metropolitan Area (GAM) and who, because of their economic, social, geographic or cultural condition, do not have access to this test.

Lines of Work:

- Educate and promote self-care in issues relating to breast cancer.
- Carry out mammographies in vulnerable communities within the country.

Partners:

ALIARSE, Costa Rican Social Security Fund, Clínica Bíblica Hospital and Auto Mercado's Pink Movement.

Results achieved:

- Mobile unit with a high quality **mammograph and digitizer**.
- **Visited more than 120 communities**, both rural and within the GAM.
- **+ 32.000 mammography studies** performed

Impact Indicators:

- **+ 300 women identified** with positive results.
- **+ 5 % of all mammographies** performed in the country.
- Development of a model of portable mammographies to allow **scaling of the project** to offer mammographies in vulnerable regions not covered by the CCSS.
- **Decrease in waiting lists** for mammographies to be performed in the country.
